

Air Conditioning Acknowledgement Form

Date:

Buyer(s) Name:

Retailer Name: Texas Home Outlet

Dear Consumer:

Regarding the installation and maintenance required for your A/C Unit:

If the home is not equipped with a disconnect box, the homeowner will be required to purchase and have the disconnect box installed. The homeowner may opt to have the A/C technician install their disconnect box the same day that he installs the unit in which case, the homeowner must arrange payment with the A/C technician separately.

Homeowners are responsible for keeping the drain line free & clear of any debris. Steps that can be taken to keep the drain line clear are as follows: Pour approximately ½ cup of bleach in the drain pan every 3-4 months, and check periodically to ensure the drain line has not fallen to the ground from the temporary stake that it was hooked up to upon installation. Should the drain line get clogged, the consumer must pay for the A/C technician to make a service call.

The installation of the A/C shall be with no greater than a line set of 20 feet. If your home requires a line set longer than this, the additional cost will be the responsibility of the homeowner. Without specific language and additional charges for additional parts on the purchase agreement, there is absolutely no deviation from this policy.

The A/C unit will be installed with 2 filters which are provided free of charge by Texas Home Outlet. The homeowner is responsible for changing or washing the filters regularly. If the filters are disposable, you must change them; if they are washable, you must wash them. Unclean filters are known to cause a spike in energy bills because they put a strain on the unit. Service problems related to not changing your filters will not be the responsibility of Texas Home Outlet.

Allergy free filters are known to cause A/C units on manufactured homes to freeze up. We recommend that you do NOT use allergy free filters on your unit and any service issues that may arise due to the use of allergy free filters will not be covered in your A/C warranty.

Texas is considered a humid and fringe climate. Failure to regularly run the A/C system for heat or cooling purposes can cause condensation to collect on the inside of the home, the damage from which will not be covered by warranty. This is a homeowner maintenance issue. Should you have any use or care questions regarding your new home, we are happy to help you.

I hereby acknowledge the receipt of said contract, and agree to adhere to the above mentioned terms. Shall I not adhere to the above mentioned terms or not follow the recommendations that Texas Home Outlet has provided to me regarding my A/C, I understand that I may be obligated to pay any service fees that are necessary to fix my non-warrantied issues.
